

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	SWTID-2026-5347
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides our team with a collaborative environment to identify and explore different ideas for improving the standard laptop procurement and configuration process. Team members can freely share ideas related to automation, task creation, hardware assignment, request tracking, and requester communication without immediately judging or limiting the ideas.

By discussing and grouping these ideas, the team can identify practical approaches to address manual processing, configuration delays, and lack of timely status communication. The ideas are then prioritized based on their relevance to the problem, feasibility, and potential impact on the employee experience.

This process helps the team shape a suitable solution for automating the standard laptop workflow using ServiceNow Flow Designer.

Step-1: Team Gathering, Collaboration and Select the Problem Statement:

Selected Problem Statement: PS-1

An employee requesting a standard laptop is trying to get the laptop request processed and configured quickly, but the procurement and configuration process involves manual steps and can be delayed because laptop configuration tasks are not efficiently automated after request approval. This makes the employee feel frustrated and uncertain about when the laptop will be ready.

Why are we selecting PS-1?

Because our project document identifies the main project problem as inefficient and manual IT procurement, particularly delays in handling standard laptop configuration.

Step-2: Brainstorm, Idea Listing and Grouping

Group	Ideas
Task Automation	• Automatic Catalog Task creation • Automatic task updates
Assignment Automation	• Automatic Hardware team assignment
Communication	• Email confirmation • Configuration-start notification • Status updates
Workflow Automation	• Automated laptop configuration workflow • Reduced manual intervention

S.No.	Proposed Automation / Enhancement	Purpose / Benefit
1	Automatic Catalog Task Creation	Automatically creates a Catalog Task once the Standard Laptop request is approved.
2	Automatic Hardware Team Assignment	Assigns the generated Catalog Task directly to the Hardware assignment group.
3	Automated Configuration Details	Updates the task with the required laptop configuration details for the Hardware team.
4	Automated Requester Email	Sends an email to the requester confirming that the approved request is being processed.
5	Configuration Start Notification	Notifies the requester when the laptop configuration process begins.
6	Real-Time Request Status Updates	Provides clear status updates throughout the laptop procurement and configuration process.
7	Reduced Manual Intervention	Minimizes manual task creation, assignment, and follow-up activities after approval.
8	End-to-End Workflow Automation	Automates the complete process from request approval through laptop configuration and completion.

Step-3: Idea Prioritization

Idea Evaluation and Priority Analysis

Comparison of proposed automation ideas. High = 3, Medium = 2.

Higher values indicate stronger relevance, feasibility, or priority.

Final Selected Idea

Automated Standard Laptop Procurement Workflow using ServiceNow Flow Designer
