Empathy Map Canvas

An empathy map is a simple visual tool used to understand the Employee / Laptop Requester's behaviours, needs, expectations, and challenges during the standard laptop request process.

For our project, the empathy map helps us understand the employee's experience while submitting a laptop request, waiting for approval, tracking the request, and waiting for configuration. It helps identify challenges such as manual processing delays, lack of timely status communication, and repeated follow-ups.

Understanding these user needs helps us design a solution that provides faster processing, automated task creation and hardware assignment, and automatic email confirmation when laptop configuration begins.
