

Project Design Phase-II
Data Flow Diagram & User Stories

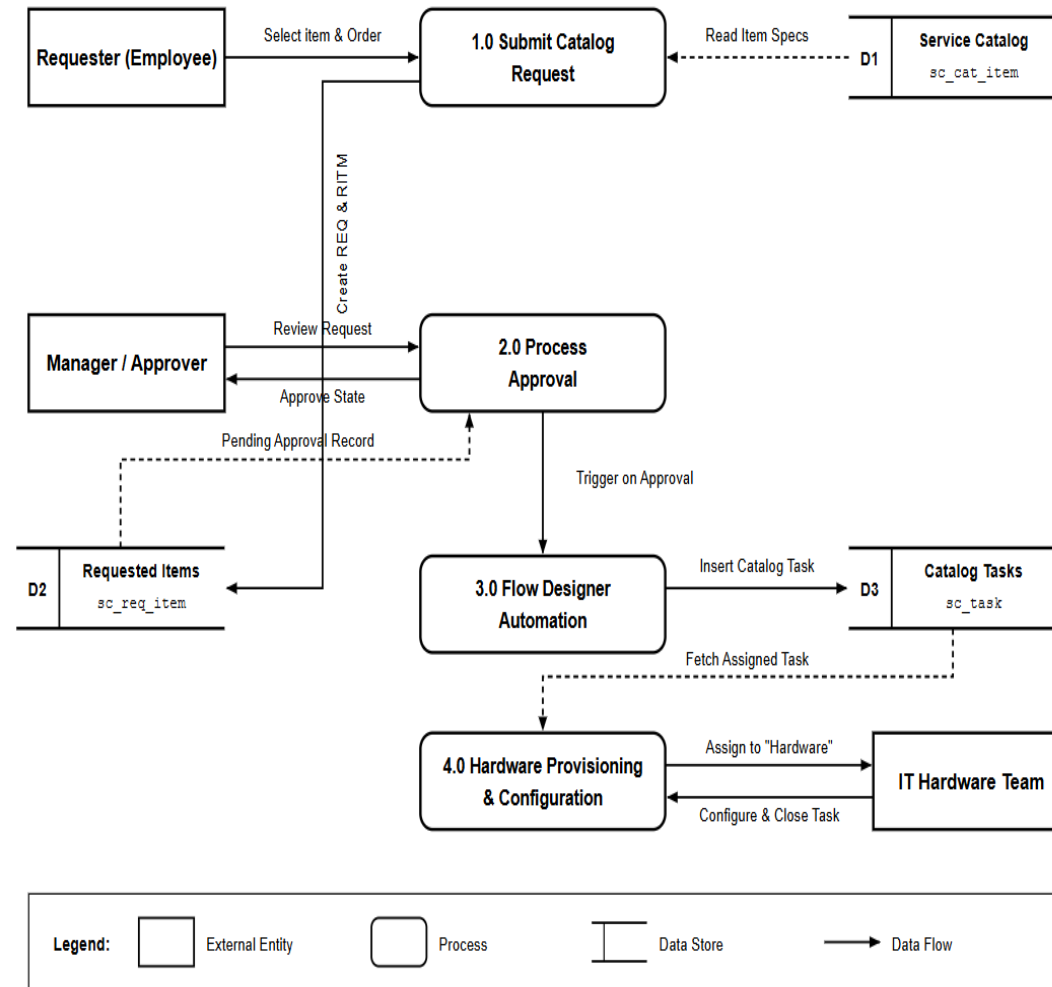

Date	3 october 2026
Team ID	SWTID-2026-5347
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DATA FLOW DIAGRAM (LEVEL-1)

Automating Standard Laptop Orders with Flow Designer

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Requester (Employee)	Catalog Browsing & Ordering	USN-1	As an employee, I want to select a Standard Laptop from the Service Catalog so that I can request required hardware without manual paperwork.	User can locate "Standard Laptop" under the Hardware catalog and submit via "Order Now".	High	Sprint-1
Requester (Employee)	Request Tracking	USN-2	As an employee, I want to view my generated Request (REQ) and Item (RITM) numbers so that I can track fulfillment progress in real-time.	System generates unique REQ/RITM records and displays stage progression.	medium	Sprint-1
Manager (Approver)	Request Authorization	USN-3	As a manager, I want to review submitted laptop requests under the Approvers tab so that procurement costs are authorized before fulfillment.	Manager can access the record and select "Approve" from the approval list.	High	Sprint-1
System (Flow Designer)	Workflow Triggering	USN-4	As the workflow engine, I want to trigger the "Standard Laptop task" flow when a catalog item is ordered so that manual dispatching is removed.	Flow triggers automatically whenever a Standard Laptop request is logged.	High	Sprint-1
System (Flow Designer)	Automated Task Generation	USN-5	As the workflow engine, I want to create an <code>sc_task</code> record assigned to the Hardware group so the provisioning queue receives it immediately.	Flow creates a task with Assignment group set to "Hardware" and state set to "Open".	High	Sprint-1
IT Hardware Team	Task Fulfillment	USN-6	As a hardware technician, I want configuration instructions inside the catalog task so that I can execute setup procedures accurately.	Task displays Short Description and Description as "Laptop need to Configured".	High	Sprint-1
System Administrator	Catalog Item Integration	USN-7	As a ServiceNow administrator, I want to attach the flow to the Maintain Items form so that the correct process engine executes for	Under "Maintain Items > Process Engine", the Flow field is saved with	Medium	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
			Standard Laptop requests.	"Standard Laptop task".		
System Administrator	Flow Activation & Governance	USN-8	As an administrator, I want to validate and activate the flow in Flow Designer so that only verified workflow logic runs in production.	Flow status switches to "Active" with execution version history tracked.	High	Sprint-1
IT Hardware Team	Hardware Staging & Verification	USN-9	As a hardware technician, I want to update task states (Work in Progress / Closed Complete) so that stakeholders know the configuration progress.	Technician can change task state to "Work in Progress" and resolve to "Closed Complete".	High	Sprint-2
Requester (Employee)	Notification & Alerts	USN-10	As an employee, I want to receive an email notification when my laptop task is completed so that I know when to collect the device.	Automated email notification triggers upon task closure with pickup details.	Medium	Sprint-2
Procurement Manager	Inventory & Asset Management	USN-11	As a procurement manager, I want the assigned laptop serial number linked to the RITM record so that hardware asset tracking is updated.	Asset tag and serial number fields are populated and linked to the user's profile.	Low	Sprint-2
System Administrator	Error Handling & Monitoring	USN-12	As an administrator, I want to monitor Flow Designer execution logs so that workflow failures or blocked tasks can be resolved quickly.	Flow Designer execution history displays execution states (Completed, Waiting, or Error) with step details.	Medium	Sprint-2
