

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	3 october 2026
Team ID	SWTID-2026-5347
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Service Catalog Ordering	Browse Hardware Catalog for Standard Laptop Configure device specifications Submit order via "Order Now" action
FR-2	Request & Item Tracking	Generate unique Request record (REQ) Generate Requested Item record (RITM) View real-time order fulfillment stage
FR-3	Approval Management	Route order to manager under Approvers section Authorization action (Right-click to Approve/Reject) Automated stage update upon approval
FR-4	Workflow Automation (Flow Designer)	Automated flow trigger on catalog item submission Read catalog order payload and variables Create Catalog Task (sc_task) with automated field mapping
FR-5	IT Fulfillment & Task Assignment	Automatic task assignment to "Hardware" group Populate short description: "Laptop need to Configured" Task state updates (Open, Work in Progress, Closed Complete)
FR-6	Catalog Item Administration	Associate "Standard Laptop task" flow in Maintain Items Configure Process Engine properties Monitor execution context and logs in Flow Designer

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Catalog interface should be self-service, intuitive, and allow employees to request a

		Standard Laptop in fewer than three navigation steps without specialized technical training.
NFR-2	Security	Access control must adhere to Role-Based Access Control (RBAC), ensuring only authorized managers can approve procurement requests and only IT Hardware group members can edit/close configuration tasks.
NFR-3	Reliability	The automated Flow Designer engine must guarantee consistent execution and automated creation of sc_task records with zero dropped order payloads upon request approval.
NFR-4	Performance	Automated workflow execution from order placement to catalog task generation and queue dispatch must complete in under 5 seconds.
NFR-5	Availability	The procurement portal and workflow engine must maintain 99.9% uptime during operational business hours to support uninterrupted hardware provisioning.
NFR-6	Scalability	The workflow architecture must handle high-volume procurement spikes (such as bulk onboarding cohorts) without degradation in task generation or queue processing speeds.
