

Project Design Phase
Proposed Solution Template

Date	03 october 2026
Team ID	SWTID-2026-5347
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The Standard Laptop Request process involves several steps such as request submission, approval, task creation, assignment, configuration, and requester communication. Manual handling of these activities can lead to delays, repeated follow-ups, and additional workload for the IT/Hardware team.
2.	Idea / Solution description	Develop an automated Standard Laptop Request workflow using ServiceNow . Employees submit requests through the Service Catalog. After approval, Flow Designer automatically creates a Catalog Task and assigns it to the Hardware/Configuration team . The team then processes and configures the laptop request.
3.	Novelty / Uniqueness	In addition to automating task creation and assignment, our solution includes a Send Email action in Flow Designer. Once the request is approved and the Catalog Task is created, the requester automatically receives an email such as “Your Standard Laptop Request is Under Configuration!” This improves communication without requiring manual status updates.
4.	Social Impact / Customer Satisfaction	Employees receive a simpler and more transparent laptop-request experience. Automated communication reduces unnecessary follow-ups, while structured task assignment helps the IT/Hardware team handle requests efficiently and keeps the requester informed.
5.	Business Model (Revenue Model)	The solution can be implemented as an internal IT service automation for organizations already using ServiceNow. It can reduce repetitive administrative work and support more efficient IT service delivery.
6.	Scalability of the Solution	The same workflow approach can be extended to other organizational IT requests such as desktop requests, accessories, software installation, device replacement, and other hardware/service requests by creating additional catalog items and Flow Designer workflows.
