

Acceptance Testing
UAT Execution & Report Submission

Date	3 October 2026
Team ID	SWTID-2026-5347
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer & Custom Email Notifications
Maximum Marks	5 Marks

REPORT:

1. Purpose of Document

The purpose of this document is to validate that the automated IT procurement and standard laptop order workflow works as expected and meets the defined functional requirements. The testing focuses on validating the end-to-end automation process in ServiceNow, including:

- Ordering a Standard Laptop from the Service Catalog.
- Automatically triggering the flow upon service catalog submission.
- Validating manager approval of the request.
- Automatically creating a Catalog Task assigned to the Hardware group with the correct short description ("Laptop needs to Configured").
- Verifying that an automated confirmation email ("Your Standard Laptop Request is Under Configuration!") is sent to the user.
- Verifying the generated email through System Logs → Emails.
- Ensuring that procurement and task information is stored accurately and consistently.
- Validating that the implemented solution performs required task assignment and notification without manual intervention.

The UAT scenarios specifically validate Standard Laptop procurement requests, manager approvals, task generation, and automated email notifications.

2. Defect Analysis

Defect analysis is performed to identify and document any issues found during the testing of the School IT Ticket automation.

The following areas are validated during testing:

Defect / Validation Area	Expected Result	Status
Catalog Order Submission	Standard Laptop should be ordered successfully from the Service Catalog	Pass

Manager Approval	Request should generate an approval record for the designated manager and update upon approval.	Pass
Catalog Task Creation	Flow should automatically create a catalog task upon approval.	Pass
Assignment Group	Catalog Task should be automatically assigned to the "Hardware" group.	Pass
Short Description	Short description should be set accurately to "Laptop needs to Configured"	Pass
Email Notification	Email notification logs should be available under System Logs → Emails.	Pass

Defect Summary

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Total
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Total	0	0	0	0	0

3. Test Case Analysis

The following test cases are used to validate the automated ticket classification and notification functionality

Test Case ID	Test Case	Test Input / Scenario	Expected Result	Status
TC-01	Standard Laptop Order & Trigger	Order "Standard Laptop" item from Service Catalog	Flow triggers automatically upon submission	Pass
TC-02	Manager Approval	Approve the pending request under Approvers section	Request state changes to Approved, initiating flow actions	Pass
TC-03	Catalog Task Generation	Verify catalog tasks after manager approval	Catalog Task (SCTASK) created with Assignment Group: Hardware	Pass

TC-04	Email Notification	Check system email logs after task creation	Automated confirmation email sent to requestor	Pass
TC-05	Short Description Validation	Inspect generated Catalog Task fields	Short Description reads "Laptop needs to Configured"	Pass
TC-06	End-to-End Data Validation	Verify complete procurement record and task linkage	Accurate and standardized task and request data stored	Pass

Test Case Execution - Standard Laptop & Task Flow

Result: PASS

Overall Test Case Result:

Test Metric	Result
Total Test Cases	6
Passed	6
Failed	0
Not Tested	0
Pass Percentage	100%
