Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Standard Laptop Request process involves multiple steps such as request submission, approval, task creation, assignment, laptop configuration, and communication with the requester. When these activities depend on manual handling, the process can become time-consuming and employees may not receive timely updates about their requests.

Our solution uses ServiceNow Service Catalog and Flow Designer to streamline this process. Once the laptop request is approved, a Catalog Task is automatically created and assigned to the appropriate hardware team. An additional Send Email action automatically informs the requester that their laptop is under configuration, improving communication and reducing manual follow-ups.

Purpose:

- ☐ To simplify the Standard Laptop Request process for employees and the IT/Hardware team.
- ☐ To reduce manual work by automating task creation and assignment after approval.
- ☐ To improve communication by automatically sending the requester an email status notification.
- ☐ To provide a structured and trackable laptop request process through ServiceNow.
- ☐ To reduce unnecessary follow-ups and help the IT/Hardware team process laptop requests more efficiently.

Define your problem	1. CUSTOMER SEGMENTS Employees who require a standard laptop for their official work and the IT/Hardware team responsible for processing and configuring laptop requests.	5. EXISTING CONSTRAINTS Manual approvals, manual task creation and assignment, delays in communication, repeated follow-ups and lack of real-time status updates to the requester.	9. AVAILABLE SOLUTIONS Manual request through emails, spreadsheets and phone calls with the IT/Hardware team, which are time-consuming and do not provide real-time tracking or automatic communication.
	2. JOBS TO BE DONE / PROBLEMS Employees need a simple and reliable way to request a standard laptop. Manual processing causes delays, repeated follow-ups, and difficulty in tracking the request. The IT team also spends time manually creating and assigning tasks.	6. PROBLEM ROOT CAUSE Too many manual steps in the laptop request process and dependency on individual communication between employees, approvers and the IT/Hardware team.	7. BEHAVIOUR Employees submit laptop requests whenever they need a new laptop or a replacement. Approvers review and approve the request, and the IT/Hardware team processes the assigned task and configures the laptop.
Identify solution ideas	3. TRIGGERS A new employee joins the organization, an existing employee requires a laptop, or a laptop replacement is needed for work purposes.	8. YOUR SOLUTION Automate the Standard Laptop Request process using ServiceNow Service Catalog and Flow Designer. After approval, a Catalog Task is automatically created and assigned to the hardware/configuration team. A Send Email action automatically informs the requester that their laptop is under configuration, providing real-time updates and improving transparency.	9. CHANNELS & BEHAVIOUR ServiceNow Service Catalog for request submission, Flow Designer for workflow automation, Catalog Task for hardware-team processing and Email for automatic requester notifications.
	4. CUSTOMER EFFORT / AFTER The employee only needs to submit the Standard Laptop request through the Service Catalog. After submission, the remaining process is handled automatically through the workflow.
