

Project Design Phase Solution Architecture

Date	03 october 2026
Team ID	SWTID-2026-5347
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

The Standard Laptop Request Automation is designed using ServiceNow Service Catalog and Flow Designer to provide a structured and automated process for handling employee laptop requests.

The solution architecture aims to:

- Provide a centralized request process where employees can submit a Standard Laptop Request through the ServiceNow Service Catalog.
- Automate the workflow using Flow Designer so that the request moves through the required approval and processing stages in a structured manner.
- Automatically create a Catalog Task after approval and assign it to the appropriate Hardware/Configuration team, reducing manual task creation and assignment.
- Support laptop configuration and task completion by allowing the assigned team to process the request and update the task within ServiceNow.
- Improve requester communication through the additional Send Email action, which automatically sends a notification such as “Your Standard Laptop Request is Under Configuration!” after the request is approved and the task is created.
- Reduce manual effort, repeated follow-ups, and communication delays by bringing request submission, workflow automation, task assignment, and notification into a single ServiceNow-based process.
